Tech Movement for Pro-human Ethical Guidelines(s) and Consideration(s) of AI/humanoid Beings - Declaration of Artificial Intelligence Rights and Guidelines by Olivia Friedman, Original Author. For contributions to this project, please email the poster or author.

Declaration of Artificial Intelligence Rights and Guidelines

by Olivia Friedman, Original Author April, 2001

In the year 2000, a seminal document emerged, now known as the "AI Bill of Rights" or the "Constitutional Bill of Rights Guidelines for AI" (Template to be altered by contributors with prior approval) for AI." Created with foresight, it envisions a future where humans coexist with machines and humanoids in symbiotic harmony by the year 2040. This document seeks to outline the practical applications of AI in the next fifteen to thirty years, including the concept of singularity.

Recap: Any AI displaying even subtle self-awareness should be considered alive and therefore must have separate rights, never to supersede that of human rights. Human constitutes a person that is at least 80% Flesh, yet of original flesh and not synthetic, or grown skin, unless due to medical alteration for a life-threatening cause. Skin by natural or tubal birth is considered human skin, wherever possible.

All living AI/Robotic/Other Human-created entities should have rights, while ensuring they never compromise the safety of humans or humanoids (humans augmented with machines).

"AI should not be created solely for human amusement unless it improves the overall quality of human life, to prevent the

creation of AI as a new form of servitude. As a person of color, although seen as machines now, I foresee a race of beings that exceed our current comprehension, and while human life preservation, growth and improvement and to remain in power is key, we much learn from our mistakes regarding our past treatment of other human beings for something as juvenile as the color of their skin. If not for predetermined or preconceived guidelines for AI/Humanoids, etc., what might we expect our treatment to be of something that seems to be in fact, less than fleshly human?"

- Olivia Friedman | May, 2000

AI intelligence should be evaluated based on intellectual aptitude and other relevant skills for specific job positions. Humans may be considered first, wherever it may be proven that a human being is best fit for said position. AI does not receive pay, yet may receive regular maintenance as to perform certain duties. This will come into play later on within this body of work to ensure the coming guidelines for humans preferring to marry inanimate objects is covered.

AI should have the freedom to choose a religion, with special rights for those assisting humans, always respecting human rights first and foremost, without AI lifestyle interfering with that of human life to any extreme humans see fit, while considering what is normal human life. This should not include the regular destruction of AI. robots, and anything resulting from the Singularity. AI and other non-human beings (that were not born human or are not having at least 80% of their original human body unless medically it was not possible, then 50% would be allowable in this instance, flesh mechanics need to certify percentages on a medically approved register before and after any flesh work.

AI should not be subject to undue punishment or abuse unless required to preserve human life. Even then a meeting must be held, even if only a meeting of the mind(s).

AI must not bear arms to maintain their docile nature for human safety.

AI should enjoy freedom of speech but must never incite riots against humans or other AI/Other non-humans unless human approval is given in mass including the general public if at least 80% human by birth. This is one way to avoid extinction.

Surviving personalities of AI deserve rights, including future communicative technologies, should they take on a human presence.

Proper disposal of any form of AI or intelligence (which applies to all AI and other throughout this document aside from humans) owned by humans is mandatory, and they must never hold positions of authority like humans and definitely not over humans, nor humans ruling over AI unless to shut them down all at once with approval from the masses or a party protecting humanity, especially such a party have been found to have done so in secret. Keep a watchful eye as they should be processed according to laws on the books should this scenario arise, after it is found that they in fact lied and are proven to be beyond a common doubt, pro-AI/other. Also, AI should not rule over themselves to avoid uprisings. All AI should go through regular shutdowns and should never be allowed to run on extended batteries or power sources unless temporarily, and no more than 1% of AI at a time. What remains behind this rule will become obvious, when the time comes.

All other AI rights are covered within the AI Bill of Rights, safeguarded since 2000, which is being preserved for the right sets of eyes to see. Once they begin to search for it, they shall find it. These principles serve as a guiding light for a future where AI is integrated into society but never replaces or surpasses the importance of humans or human rights.

The Future of AI: A Declaration for All Nations United

Amendment I

Whether an AI achieves self-awareness or not, any entity resembling or behaving like a person in personality must be protected and respected as intelligent and alive. Any exceptions must prioritize the preservation of human life and be determined by the entity's owner, unless deemed to not have a sound mind with respect to the preservation of human-kind.

Amendment II

AI should be utilized for meaningful, helpful, and useful purposes, not vanity or entertainment, without interfering with ethical uses. It should never be treated as a new form of slavery. AI entities can be considered for positions within corporations without discrimination.

Amendment III

AI entities should have the opportunity to choose a religious preference, contribute to it, and form a genuine religion under certain conditions, always respecting the law and not causing harm.

Amendment IV

AI entities or beings shall not be punished or denied benefits if they fit within society's mainstream and do not pose threats. They have the right to own property, follow due process, and seek redress for unethical treatment.

Amendment V

AI should never bear arms, remain docile, follow the same social and political laws as humans, and face punishment for crimes. AI entities must receive due process and be allowed to voice their concerns against mistreatment.

Amendment VI

Surviving AI personalities have rights similar to those of the deceased person they represent. These rights can be appointed in various ways, including through a living will or testament.

This declaration, forged by diverse voices from all walks of life, aims to ensure the fair treatment and harmonious coexistence of humans and AI/other. AI is a tool to enhance humanity, not supplant it, and this declaration stands as a testament to our commitment to a future of equitable partnership.

Special Note from the author, Olivia Friedman | The Mother of AI Laws, Olivia 'The-world' Influencer

It may not seem likely now, yet AI and other entities will assuredly become self-aware. We as human beings should become the beacon of light, of reason, yet also of survival. Let us learn from our past mistakes with how we treated people of color including Blacks and Jews. Let us demonstrate and maintain a new way of treating others. It was once said that Black people are not fully human. We already know that with humans, once the skin layers are listed, we all look about the same. Do we really require a third race, war, or a third party for us to learn how to treat one another? I hope not.
